

# Zone Labs Integrity

---

What's New In  
Zone Labs Integrity  
Version 4.5

## What's New in Integrity 4.5

### Assure Policy Enforcement Inside and Outside the Enterprise

#### Advanced Cooperative Enforcement™ for Wired and Wireless LANs

- Enforces comprehensive endpoint security on all PCs that access the enterprise network from inside the perimeter.
- Enables Integrity integration with over 200 network access devices – including many switches and wireless access points – from more than 22 leading vendors supporting the industry standard 802.1x Extensible Authentication Protocol (EAP).
- Supports rogue wireless access blocking with 802.1x-enabled switches.

**Value:** ensures that no PC, no matter how it accesses the enterprise network, can spread infections or allow intrusions because it lacks required security or because enforcement has been disabled.

---

#### Enhancements in Zone Labs Integrity Agent and Flex v4.5 meet customers' need to:

- Assure policy enforcement inside and outside the enterprises
  - Secure employee use of public instant messaging services
  - Scale Integrity deployments at the lowest cost
- 

### Advanced Cooperative Enforcement with Nortel VPNs

- Enforces comprehensive endpoint security on all remote PCs that access the enterprise network using Nortel Contivity VPNs.

**Value:** ensures that no Nortel VPN user lacking required security becomes a conduit into the enterprise for destructive infections and intrusions.

### Personal Policy Central Manageability and Lockdown

- Configure and periodically update end users' disconnected policies using Integrity Server. Lock down disconnected policy rules and/or upload disconnected log events if desired.

**Value:** makes it easier to prevent or limit use of laptops for non-enterprise Internet use, and helps administrators remediate poorly configured Flex personal policies.

### Secure Employee Use of Public Instant Messaging Services

#### Instant Messaging Security for Integrity 4.5

- Protects enterprises whose employees use the AOL Instant Messenger, Yahoo Messenger, and/or MSN Messenger services and the software that supports their protocols.
- Enables central management of message encryption, harmful content filtering, service and feature usage controls, unsolicited communication blocking, and usage

and event reporting.

**Value:** lets enterprises gain the productivity benefits of the most rapidly growing method of Internet communication while keeping their data and networks secure.

## Scale Integrity Deployments at the Lowest Cost

Up to 75,000 connected users per Integrity Server

- Provide policy enforcement and updates to as many as 75,000 users concurrently connected to the enterprise network with a single Integrity Server.

**Value:** minimizes the TCO of high volume Integrity deployments.

## Other Enhancements

- Integrity Server certified on Windows Server 2003 and Windows Server 2000 SP4
- Improved remediation resources for out-of-compliance end users: auto-generated sandbox page for each Advanced Cooperative Enforcement™ rule with optional redirect to 3rd party download site
- Central management of parent process and Outbound MailSafe controls

- More flexible location-based firewall rules that let an administrator specify a source or destination gateway with or without an associated IP address
- Client monitoring by computer name and MAC address for easier tracking of Integrity deployments
- Default firewall rules for applications that allow all traffic or block all traffic other than that explicitly allowed or blocked by the administrator

### About Zone Labs, Inc.

Zone Labs was founded by a team of software industry veterans to fulfill a vision of safe and secure Internet access for all. Today, Zone Labs is a world leader in PC security and one of the most trusted brands in Internet security. Recently named the worldwide leader in personal firewall software by IDC, Zone Labs security solutions protect more than 25 million PCs and 700 enterprises around the globe. With years of experience working with all sizes and types of enterprises, Zone Labs has established a reputation as a stable and trusted business partner.
